**path**  
ENERGY

**YOUR JOURNEY TO CLEAN  
AFFORDABLE ENERGY**

*The definitive guide to going green  
and saving on business energy bills*

WE REDUCE BUSINESS  
ENERGY BILLS BY  
**46** PERCENT  
ON AVERAGE

1. Solar and battery storage  
turnkey design and installation

2. Tariff reduction & optimisation  
with over 65+ supplier options

3. Trade your excess solar  
energy for the best price

4. Continuously analyse your energy  
data for ongoing saving opportunities

# CASE STUDY

Year 1 saving

**£172,508**

Bill reduction

**42.86%**

System cost

**£135,120**

Carbon impact  
equal to planting

**7,091 trees**

## Client case study

**Location:** Leeds, West Yorkshire

**Sector:** Student accommodation - 232 beds

**Services used:** Solar design and installation, tariff optimisation, excess solar trading and ongoing energy analysis

Saving and bill reduction figures are based upon forecasted solar usage and generation and a change from existing average tariff renewal rates to an optimised rate provided via Path Energy's trading team. Prices are after tax deduction benefit under the annual investment allowance. You should seek independent tax advice regarding AIA.

# TURNKEY SOLAR SOLUTIONS

From savings modelling behind a desk, to donning hard hats and climbing scaffolding in the freezing cold, we take care of everything needed...and more!

Typical electricity rates for business are over 60p/kWh. You can generate your own solar energy at just **4.5p/kWh**

With a **25 year performance warranty** on all tier 1 panels, you can lock in your long-term predictable energy costs

Generate your own **100% green** renewable energy, giving you a quantifiable carbon reduction

If your current energy supplier offered you to sign up at **4.5p/kWh for 25 years**, would you say yes? If you would then, solar is for you!

# STORE IT, USE IT, SELL IT.

Take control of your energy usage with battery storage. Automatically charge the battery when energy is cheap at night and then use it in the day to avoid expensive rates. Plus store any excess solar energy to use later for more savings.

**Stores your solar energy when you aren't using it, to use later when you do need it**

**Utilises cheap night time energy rates (like the old economy 7) to charge up for less and use in the daytime**

**Automatically sells any spare solar energy when prices are at their highest to maximise your savings**

# TAPPING INTO TARIFFS

Changing energy rates isn't just about finding the lowest price per kWh, our unique take allows you to find the best opportunity to save the most on your bills overall.

Our trading team take your unique energy data and get the suppliers to tender a **bespoke deal for your business**

**32.8% average saving** achieved by our clients in 2022 when using our smart platform vs. standard renewal quotes

Our platform continuously checks **65+ energy suppliers** against your realtime usage data to keep you on the best deal
